

Exploratory Analysis of the Irish Housing Market (2019–2024)

Domain & Data

- Domain: Irish Residential Property Market Analytics
- Dataset: Property Price Register (PSRA)

Analytical Approach

Exploratory Data Analysis (EDA) using Tableau to:

- Identify price and sales patterns
- Compare counties and property conditions
- Highlight affordability trends

Key Findings

- Strong urban–rural divide, with Dublin showing highest prices and volumes
- Second-hand properties dominate transactions
- Median prices increase sharply from 2021 onward
- Price growth outpaces affordability in several counties

Audience & Value

- Government policy makers: identify affordability stress and regional disparities
- Investors & developers: assess demand concentration and regional price stability
- Evidence-based support for housing policy and planning decisions
- Improved, data-driven investment and development strategies

Key Analytical Questions

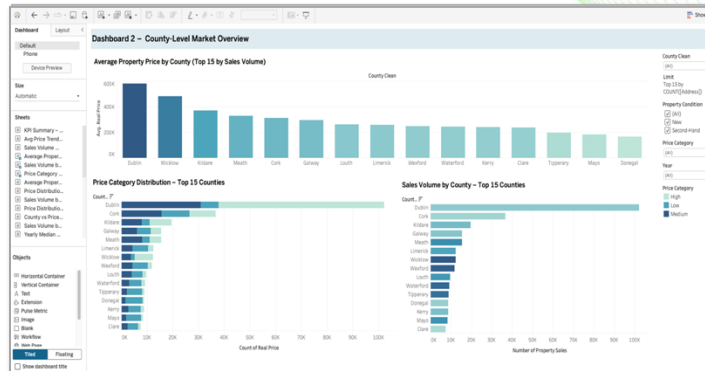

- How have residential property prices evolved over time?
- Which counties show the highest prices and sales activity?
- How do new and second-hand properties differ in pricing?
- Where are affordability pressures most evident?

Why This Matters

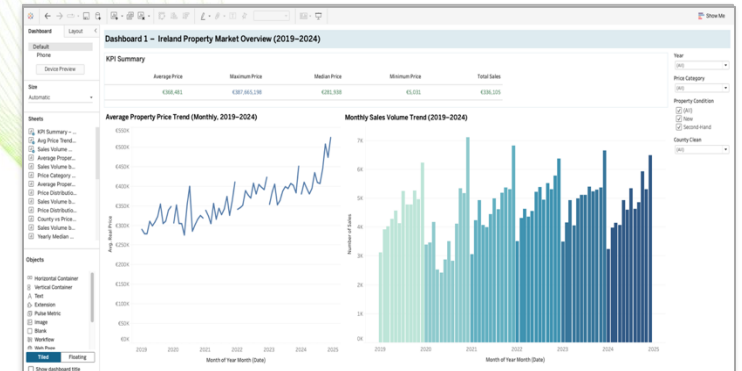

- Housing affordability pressures
- Regional inequality across counties
- Evidence-based housing policy and investment decisions
