

Irish Housing Market Analytics Dashboard

Project Overview

This Tableau project analyzes the Irish residential housing market using Property Price Register data from 2019 to 2024. The project combines exploratory analytics and predictive analytics to understand property price trends, regional disparities, affordability pressure, sales activity, and market risk across Irish counties.

Business Objective

The objective of this project is to support evidence-based decision-making for housing policy analysts, real estate investors, developers, and market analysts by providing interactive Tableau dashboards on housing prices, sales volume, property condition, affordability, and market volatility.

Dataset

Irish Residential Property Price Register / PSRA Property Price Register
Period analyzed: 2019–2024

Tools Used

- Tableau
- Excel
- Data Cleaning
- Exploratory Data Analysis
- Data Visualization
- Forecasting
- Regression Analysis
- KPI Reporting

Dashboards Created

Part 1: Exploratory Analytics Dashboards

- Market Overview
- County Market Overview
- Property Condition Analysis
- Price Category Analysis
- Market Trends Over Time
- Property Price Distribution & Spatial Analysis
- Sales Dynamics & Contribution Analysis
- Quarterly Market Performance

Part 2: Predictive Analytics Dashboards

- County Median Price Forecast
- Sales Volume vs Price Growth Analysis
- Affordability Stress Classification
- Price Volatility Risk by Property Condition

Key KPIs and Metrics

- Average Property Price
- Median Property Price
- Total Sales
- Sales Volume
- YoY Median Price Growth %
- Affordability Index
- Price Volatility
- Property Condition Split
- County-Level Price Comparison

Key Insights

- Dublin and surrounding counties show the highest property prices and sales volumes.
- The housing market shows a clear urban-rural divide.
- Second-hand properties dominate overall transactions.
- Median property prices increased sharply from 2021 onward.
- Sales volume and price growth show a positive relationship, indicating market pressure.
- Counties with high sales activity tend to show lower affordability.
- Second-hand properties show higher price volatility than new builds.

Business Value

This project helps users identify high-demand counties, affordability pressure, regional price differences, seasonal sales patterns, investment risk, and potential market overheating. The dashboards support better decision-making for housing policy, planning, real estate investment, and market analysis.
